

## Paramita Atmodiwirjo

is a professor of architecture at Universitas Indonesia. She studied architecture at the University of Sheffield and Universitas Indonesia and education at the University of Bath.

Her research interests are on the relationship between architecture, interior and the users' behavior, and how such relationship should be the basis for designing for the users' well-being. Her works particularly focus on the importance of human body in our understanding of architecture and interior, and the needs to pay attention to users with special needs including children, elderly, and people with disabilities.

She is also active in developing learning methods for architectural education, to promote students' creativity and awareness of the relationship between users and space.

She works closely with schools and communities in various community engagement projects to improve the quality of spaces for learning and living. She has been involved in the development of national standards for educational facilities with the Board of National Standard of Education (BSNP).

She has been awarded the FutureArc Green Leadership Award 2019 for the initiative to build the schools for children after disaster, Holcim Awards Asia Pacific 2011 for the participatory design works with the community in the villages, Teaching Excellence Award 2014, IAI Jakarta Award 2012, Community Engagement Award 2010 and 2011.

She is the chief editor for *Interiority* journal, the editorial board member for *International Journal of Technology (IJTech)* and *Environment-Behaviour Proceedings Journal (E-BPJ)*, and the secretary for *International Association For Lifewide Learning (IAFLL)*.
